

## **Mario Ascoli, Ph.D.**

Professor  
Department of Pharmacology  
College of Medicine  
University of Iowa

### *Research Interests*

Research in my laboratory is driven by the hypothesis that the binding of agonist to the lutropin and follitropin receptors (LHR and FSHR) results in the activation of multiple signaling pathways and that these pathways, either alone or in combination, stimulate the proliferation and differentiation of their respective target cells (Leydig and Granulosa cells).
